

ONYXWorks™

Single Point of Control for all your Fire and Life Safety Systems

ONYXWorks, a PC based graphical workstation, is NOTIFIER's next generation of integration technology that links fire alarm, security, card access, CCTV, and other key information in your facility. ONYXWorks is a single point of control for the life safety and security systems throughout your building, city, state or even worldwide using Local or Wide Area Networks.

ONYXWorks graphical workstation unites your fire alarm network, whether NOTIFIER's or other manufacturers' panels, to your security systems. ONYXWorks is an ideal retrofit solution to integrate existing fire alarm panels together. From a single PC, the facility manager can view and manage all systems over a proprietary network. ONYXWorks is both UL- and ULC-listed for reading remote status of all the NOTIFIER fire panels on your network.

Intuitive User Interface

ONYXWorks has an intuitive graphic user interface to facilitate setup and minimize operator training. The graphic workstation displays and controls diverse systems from different manufacturers on a single graphic user interface. The workstation presents graphical floor plans for fire and non-fire reporting as well as a history manager that tracks, stores and filters events for viewing.

ONYXWorks is an event manager for a range of fire alarm control panels, security panels, and life safety systems from multiple vendors. Operators are presented with a consistent interface for all monitored equipment. The workstation features customizable screens and has many configuration options to meet your specific needs. The ONYXWorks workstation monitors local networks and remote sites giving operators easy viewing of event history and fire alarm panel devices. In addition, ONYXWorks displays system status, NOTIFIER device properties and other vital system information.

Fast Event Notification and Response

With ONYXWorks, all fire and security systems are controlled on a single system that can be monitored by facility safety staff. If a potential emergency situation arises, it is immediately displayed on the screen as a priority event. Therefore, safety personnel can identify and investigate the event immediately or contact the appropriate responder. For responders, ONYXWorks helps pinpoint the scene of concern with a detailed map of the building and event location.

Easy System Setup

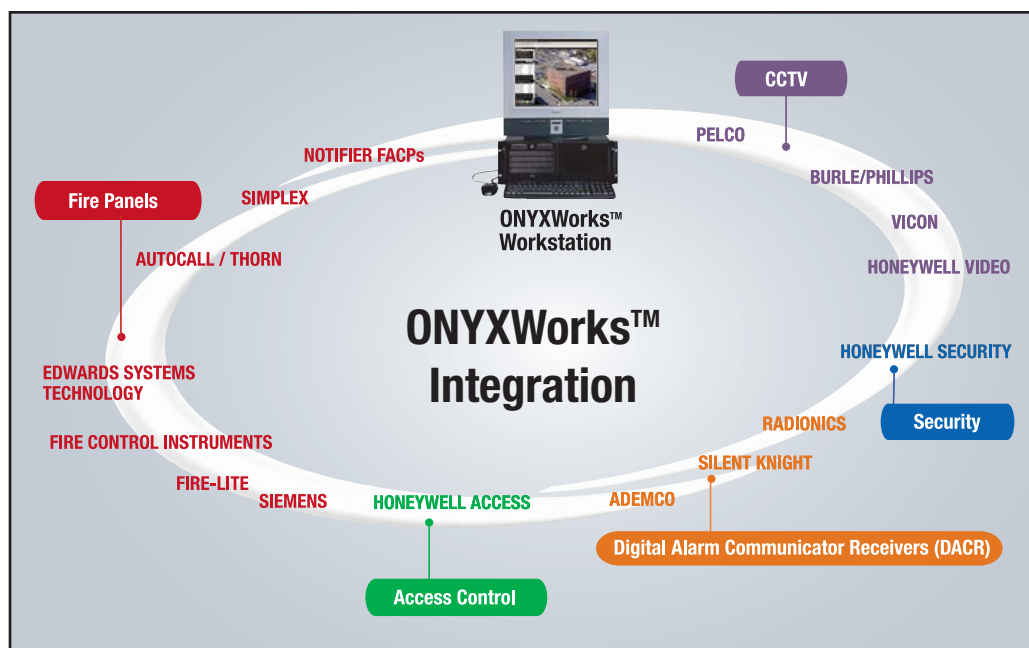

ONYXWorks setup is simplified by allowing the import of existing files of your building plans. CAD floor plans can be imported as bitmap (BMP) or Windows® Metafiles (WMF) directly into ONYXWorks for decreased system configuration time. ONYXWorks has an Autocreation of Devices function for rapid addition of a device on your network. The Autocreation of Devices icon in the workstation automates setup of node number, device number and provides the icon. This utility then adds the device into the floor plan with all the pertinent information.

Secure Access

ONYXWorks Security Profiles prohibit unauthorized access to ONYXWorks. System Administrators define and maintain unique security profiles as well as determine which users have access to ONYXWorks.

Improved System Maintenance

ONYXWorks is a valuable maintenance and diagnostic tool. ONYXWorks reports and flags trouble events on a real-time basis so maintenance personnel monitoring the system are immediately alerted. The History log allows searching by device to determine if any trouble or maintenance patterns exist for an informed response.

Service and Support

NOTIFIER products and services are offered through an extensive network of authorized Engineered Systems Distributors. These distributors are ready to assist you in the design installation, commissioning and management of your ONYXWorks and NOTIFIER fire alarm control systems.

To learn more about ONYXWorks call (866) 651-8418 and ask for the distributor nearest you. Or visit us at www.onyx-works.com.
